

Post-doctoral positions

The Research Ring on oxidative stress in the nervous system calls for one post-doctoral position

Christian Gonzalez-Billault
Marco Tulio Nuñez

Candidates should send their applications until **November 30th 2014** to Dr. Christian Gonzalez-Billault at chrgonza@uchile.cl

Applications should include full CV, two references and a statement of purpose letter

Our research group study the role of reactive oxygen species (ROS) in normal physiology and pathological conditions of the nervous system.

We are currently looking to recruit postdoctoral researchers with expertise in the following areas:

Cellular and molecular approaches to study the contribution of ROS species to neuronal differentiation and/or neurodegeneration/regeneration

This position requires expertise in neuronal primary cultures, cellular-molecular biology, confocal microscopy and use of animal models.

Candidates must possess a PhD degree in Chemical or Biological Sciences

Positions available starting from January 2015
